

GreenHaul - Pitch Deck Summary

GreenHaul is a Clean Energy startup building smart routing software for last-mile electric delivery fleets.

We help logistics companies cut fuel and charging costs by optimizing EV delivery routes and charging schedules.

Stage: MVP. We have a working pilot with two regional delivery fleets and are onboarding a third.

Key challenges:

- Securing regulatory approvals for grid integration and utility partnerships across multiple states
- Raising a seed round to expand our route-optimization engine and hire a data science team
- Building partnerships with utility companies and EV charging network operators
- Achieving product-market fit with fleet operators beyond our initial pilot customers

Team gaps:

- No in-house regulatory/compliance expertise for energy sector rules
- Need a VP of Sales with enterprise logistics experience
- Missing a senior data scientist for our forecasting models

We are seeking a mentor who deeply understands Clean Energy markets, regulatory compliance, and go-to-market strategy for climate tech and energy infrastructure startups.
