

SkillBridge - Pitch Deck Summary

SkillBridge is an EdTech startup building an adaptive learning platform for K-12 STEM education. Our platform uses adaptive curriculum design to personalize lesson plans for individual students. Stage: idea. We have a working prototype but have not yet launched with any school districts.

Key challenges:

- Validating product-market fit with school districts and individual teachers
- Conducting user research with students, parents, and teachers to refine our curriculum design
- Building go-to-market partnerships with school districts and education nonprofits
- Understanding procurement processes for K-12 education technology

Team gaps:

- No curriculum design expert with K-12 classroom experience
- Need someone with experience selling into school districts (B2B sales in education)
- Missing a co-founder with a background in learning science / pedagogy

We are seeking a mentor who understands EdTech, curriculum design, user research with students, and go-to-market strategy for early-stage education startups.
